

POLAR BEAR

The polar bear is the largest living land carnivore. They're instantly recognisable from the distinctive white colour of their thick fur.

Read on to discover more interesting facts about them.

WHERE
THEY
LIVE

Polar bears live in the Arctic on land and ice-covered waters. They can be found in five countries: the United States (Alaska), Canada, Russia, Greenland and Norway.

CHARACTERISTICS

- Polar bears have more hair on the bottom of their paws than any other bear. These furry foot pads may increase their grip on slippery sea ice and also help keep their feet warm.
- They can grow up to 3 metres in length.
- Males are much bigger than females – weighing 300-650kg, but can weigh up to 800kg.
- Strong swimmers, they spend most of their life around water.
- They may be big, but they're also fast. They stalk their prey moving low and slow, camouflaged by the ice then they charge at speeds of up to 30mph!

DID YOU KNOW

Pregnant female polar bears don't eat for up to eight months - while they give birth and nurse their young.

FAMILY

Female polar bears give birth in snow dens to a litter of cubs (twins are common). The mother will nurse and care for the cubs for two and half years until they are independent, during this time she will wait and not have any more cubs. Adult males live alone throughout the year.
