

Minibeasts and their habitats

What is a habitat?

A habitat is a place where an animal lives. It provides the animal with food, water and shelter. There are many different sorts of habitats around the world, from forests to grasslands and from mountain slopes to deserts. Different habitats are home to different animals.

Match the minibeast to its habitat!

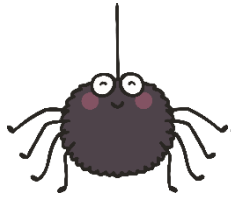

Read the labels with an adult.

Draw a line from the minibeast to its habitat. The first one has been done for you.

If you can't print off the sheet, talk to an adult about where you think each animal lives.

Well done, explorers!
